Our Vision of Old Windsor in 2030

In 2030, Old Windsor continues to be a large rural village, a thriving community where a mix of generations live, work and enjoy access to the unique natural environment of the area.

New development has addressed the need to provide housing for the older generations to downsize and young families to stay in the community. This has been achieved by utilising brownfield sites within the village.

Development has been sympathetic to the existing heritage of Old Windsor, particularly within the conservation area and around the numerous important ancient monument sites and their settings.

Enhanced facilities on the Recreation ground continue to evolve. A new community centre providing meeting and recreational space with catering facilities has been provided to improve community facilities.

The biodiversity, wildlife and its habitat, trees and hedgerows of the area have continued to thrive.

The sewerage and drainage infrastructure issues affecting Old Windsor have been resolved.
